<p>* Rapid Retargeting is a Congressional add executed under project unit T1886 in FYs 2000 - 2003..</p> <p>** Collaborative Logistics Productivity Program (formally VSIP) is a Congressional add executed under project unit T2767 in FYs 2000 - 2003.</p> <p>*** Compatible Processor Upgrade Program is a Congressional add executed under project unit T2769 in FYs 2000 - 2004.</p> <p><b>A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b></p> <p><b>Ordnance Management</b> - Covers the conversion of Naval Ammunition Logistics Center(NALC) systems to the Ordnance Information Systems(OIS). These upgrades were previously procured with Operation and Maintenance, Navy funding. Funding has been moved to RDT&amp;E,N to comply with 28 Oct 99 OSD Comptroller and 2 Nov 99 ASN(FMC) direction clarifying use of RDT&amp;E funds.</p> <p><b>JEDMICS</b> - In FY85 Congress directed the Services and Defense Logistics Agency to permanently capture, manage and control engineering data in digital format so it would be available to support competitive spares re-procurement. As of April 2000, the Joint Engineering Data Management Information &amp; Control System (JEDMICS) program manages and controls 78,500,000 engineering images and has 32,000 authorized users responsible for over 70,000 user sessions per month. Over 2 million digital images are retrieved each month. New data and new users are added each month as DoD re-engineers its business processes to take advantage of digital data that is managed and controlled for corporate reuse. The JEDMICS system is deployed at 29 interoperable sites that service 600 locations worldwide. Data stored in JEDMICS is used for Logistics Support, Spares re-procurement, Weapons Systems procurement, Engineering, Maintenance, Distribution, Manufacturing, Air National Guard and Deployed Engineering Technical Services organizations. JEDMICS facilitates work process re-design since its brings the electronic drawings to the desktop, shop floor or flight line in real time eliminating walk, wait and slack time to retrieve drawings. Additionally, Administrative Lead Time, Repair Turn Around Time, ECP processing time, demilitarization time, and all cycle times dependent on engineering data have decreased with the real time availability of digital engineering data. JEDMICS also facilitates Electronic Commerce since it produces digital technical data packages that can be forwarded along with an electronic order. Funds are for Commercial Off The Shelf (COTS) evaluation, integration, and test and evaluation. JEDMICS funds development efforts which are required to integrate COTS upgrades.</p> <p>**** The FY 2003 control was erroneously overstated by \$3.4M. The correct amount is reported above.</p>

<b>A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b> Rapid Retargeting (RRT) is a new design process which will provide the technology to eliminate obsolete components and reduce multiple electronic modules into a single, programmable design. This process will also be employed to replace many standard module types with programmable COTS components thus greatly reducing shipboard sparing requirements.

A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

Collaborative Logistics Productivity (CLP) is a government owned, contractor maintained, web-enabled information program providing DoD users with access to an open environment of logistics, supply chain, and engineering design interface data. Beginning in FY 02, CLP expands upon the objectives of its predecessor, the Virtual System Implementation Program, by adding logistics initiatives to the pre-existing engineering network. Given its broader purpose, CLP is designed to provide the Navy engineering and logistics infrastructure with the tools to shorten weapons system acquisition lead time, reduce equipment sparing requirements and improve equipment sustainability, while decreasing total ownership costs. Geographically dispersed users --- including DLA, the NAVICP, acquisition program managers, engineering field activities, and private industry --- will use CLP integrated data and standard tools from multiple sources to work collaboratively to develop and sustain weapons systems while leveraging existing/emerging applications for improved decision making.

<b>A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>  The Compatible Processor Upgrade Program (CPUP) is a system-on-a-chip applications where specific standard processor products are used to modernize existing systems while preserving legacy software and infrastructure, adapt commercial designs for radiation environments and to optimize system designs for the best mix of performance, system size and weight, power usage and heat generation. These products are foundry technology independent and provide for long term availability. Funds are required by 1 Oct 2000. The program will be executed using a fixed price contract with CPU Technology, Inc., of Pleasanton, CA and the funds will be obligated by 30 Sep 2002. The impact of not receiving these funds as soon as possible after the fiscal year begins would be to increase support costs, adding to weapon system obsolescence and increased support problems. Response to the need for fleet upgrades of performance, function and reliability will be at great disadvantage to Navy operational readiness requirements.

<p><b>A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b></p> <p>Naval Ammunition Logistics Center(NALC) systems conversion to the Ordnance Information Systems(OIS): The OIS is an umbrella concept that integrates approximately 12 different functions that are currently produced by "stove-pipe" systems. OIS is an integrated suite of tools that uses the latest available information technology and best commercial practices to provide timely, relevant and accurate ordnance information and global ordnance visibility. It integrates wholesale, retail, and unique ordnance decision support systems to facilitate global ordnance positioning and information sharing across the DoN ordnance community to maximize warfighter support. Without a robust ordnance information system, the Navy and Marine Corps Aviation's ability to prevail in combat is jeopardized. This degradation will increase exponentially in the joint environment and the RDT&amp;E initiatives listed herein are designed to ensure maximum Information Technology(IT) capability.</p>

RDT&E Articles Qty								
<p><b>A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b> A. (U) Joint Vision 2020 calls for a concerted, service-wide effort towards focused logistics, including real-time total asset visibility. One specific milestone in this effort is that by FY04 the services will “implement fixed and deployable automated identification technologies and information systems that provide accurate, actionable total asset visibility”. Moreover, a November 1999 document issued by the Joint Chiefs of Staff outlined the 57 highest priority CSS requirements identified by Combatant CINC’s and Joint Warfighters. Priority number eleven of the fifty-seven reads as follows, “Joint warfighter is looking for visibility of class V, ammunition, that is on-hand, in-transit or at the point of origin awaiting shipment. The information must be current, real-time information with projected departures and arrivals through each node of the distribution system.”</p> <p>For the last 4 years, the NSWC (in conjunction with a number of commercial industry RFID and MEMS manufacturers) has evaluated miniaturized RFID and MEMS devices that have the potential to resolve many of today’s critical ammunition visibility and safety shortfalls. The results of these tests have led to the concept development and subsequent approval of the ATOS ACTD. Some of the more important aspects of this ACTD are:</p> <p>a. The RFID tags, attached to the munitions container, will be programmed to transmit its presence in a storage facility on a regular and frequent basis. This provides near real time visibility of critical munitions while in storage (a capability not available today) and coupled with the current in-transit visibility (ITV) infrastructure, while in-transit. If proven, this capability will complete the requirement for “...accurate and actionable total asset visibility” as required in FY04 by Joint Vision 2020.</p> <p>b. The MEMS sensor, when integrated into the RFID tag will facilitate the transmission of temperature and humidity readings. This data will then be stored in a centralized environmental database for use by the various weapons systems QA/QE managers. This capability has the potential of providing the warfighter with more reliable munitions and reduced ammunition accidents caused by currently unmonitored environmental extremes. Moreover, the system will provide local stores managers the benefit of automated alarms for high or low extremes in weapons storage environments.</p>

<p>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: In FY85 Congress directed the Services and Defense Logistics Agency to permanently capture, manage and control engineering data in digital format so it would be available to support competitive spares re-procurement. The Joint Engineering Data Management Information &amp; Control System (JEDMICS) program manages and controls 77,000,000 engineering images and has 34,000 authorized users responsible for over 70,000 user sessions per month. Over 2.5 million digital images are retrieved each month. New data and new users are added each month as DoD re-engineers its business processes to take advantage of digital data that is managed and controlled for corporate reuse. The JEDMICS system is deployed at 26 interoperable sites that service 600 locations worldwide. Data stored in JEDMICS is used for Logistics Support, Spares re-procurement, Weapons Systems procurement, Engineering, Maintenance, Distribution, Manufacturing, Air National Guard and Deployed Engineering Technical Services organizations. JEDMICS facilitates work process re-design since it brings the electronic drawings to the desktop, shop floor or flight line in real time eliminating walk, wait and slack time to retrieve drawings. Additionally, Administrative Lead Time, Repair Turn Around Time, ECP processing time, demilitarization time, and all cycle times dependent on engineering data have decreased with the real time availability of digital engineering data. JEDMICS also facilitates Electronic Commerce since it produces digital technical data packages that can be forwarded along with an electronic order. Funds are for Commercial Off The Shelf (COTS) test, evaluation and integration. JEDMICS development efforts are required to integrate and test COTS upgrades.</p> <p>* The FY03 control was erroneously overstated by \$3.4M due to Issue 68849. The correct amount is reported above.</p>

Data stored in JEDMICS is used for Logistics Support, Spares re-procurement, Weapons Systems procurement, Engineering, Maintenance, Distribution, Manufacturing, Air National Guard and Deployed Engineering Technical Services organizations. JEDMICS facilitates work process re-design since it brings the electronic drawings to the desktop, shop floor or flight line in real time eliminating walk, wait and slack time to retrieve drawings. Additionally, Administrative Lead Time, Repair Turn Around Time, ECP processing time, demilitarization time, and all cycle times dependent on engineering data have decreased with the real time availability of digital engineering data. JEDMICS also facilitates Electronic Commerce since it produces digital technical data packages that can be forwarded along with an electronic order. Funds are for Commercial Off The Shelf (COTS) test, evaluation and integration. JEDMICS development efforts are required to integrate and test COTS upgrades.</p>

Subtotal Support			4.665	2.006		2.472					9.143	9.143
Remarks: FY 2003 funds are used to web enable the digital data delivery, data integrity and output functions of JEDMICS and to provide data to the desktop in web accessible formats. These efforts reduce the number of JEDMICS related desktop applications and retain data accessibility and interoperability across the Services as the Navy transitions to a single intranet. FY 2004 funds are used for development and test efforts to enhance WebJEDMICS for data access and retrieval via web portals. The efforts also enable native support within JEDMICS for the storage and manipulation of complex data formats.
